

TryNex Lifestyle

DATABASE HEALTH REPORT

Schema audit, migration status, failover topology, and query optimisation

Generated: May 14, 2026 · Confidential · trynexshop.com

Active node	Replit Primary (host: helium)
Active node latency	10-13 ms (live measurement)
Total DB nodes	1 active + 3 failover Neon + 2 specialist shards = 6 nodes
Healthy nodes	1 / 6 (others unconfigured — awaiting production credentials)
Migrations applied	13 / 13 — auto-run at API server startup
ORM	Drizzle ORM 0.45 with drizzle-kit for migrations
Connection pool	node-postgres (pg 8.20), pool max: 10
Connector strategy	Multi-URL, failover: env chain !' first successful connect

ID	NAME	HOST	STATUS	LATENCY	ROLE
1	Replit Primary	ep-helium (auto)	ACTIVE	10ms	Replit PostgreSQL (dev + staging)
2	Neon Main	ep-proud-hill	STANDBY	—	Production primary failover (unconfigured)
3	Neon Secondary	ep-small-cake	STANDBY	—	Overflow failover (unconfigured)
4	Neon Failover	ep-crimson-dawn	STANDBY	—	Last-resort failover (unconfigured)
5	Neon Products	ep-crimson-mud	STANDBY	—	Products shard (unconfigured)
6	Neon Analytics	ep-cool-mountain	STANDBY	—	Analytics shard (unconfigured)

000000	Initial schema — admins, settings, products, categories
000001	Orders table with customer, shipping, payment fields
000002	Blog posts table with slug, SEO, categories, tags
000003	Newsletter subscribers + source tracking
000004	Studio assets — linked to orders (design uploads)
000005	Admin activity logs (AUDIT table)
000006	Customers table — auth, Google/FB, referral fields
000007	Design drafts — persisted canvas state
000008	Promo codes — type, value, expiry, usage tracking
000009	Referrals — owner, code, earnings, active flag
000010	Gift hampers — items, occasions, customizable
000011	Testimonials + reviews tables
000012	Admin sessions --- tokenHash, expiry, revocation

	id, username, passwordHash, totpSecret, totpEnabled, createdAt	Auth
admin_sessions	tokenHash, adminId, role, expiresAt, revokedAt, ip, userAgent	Auth
settings	key, value, updatedAt (80+ configurable settings)	Config
categories	name, slug, description, imageUrl, productCount	Catalog
products	name, slug, price, discountPrice, sizes, colors, stock, featured, customizable	Catalog
orders	orderNumber, customerName, items[], subtotal, total, status, paymentMethod	Commerce
customers	email, phone, passwordHash, googleId, referralCode, isGuest	Auth/CRM
blog_posts	title, slug, content, category, tags, published, viewCount, trending	Content
studio_assets	orderId, type, url, thumbnailUrl	Design
admin_activity_logs	adminId, action, details, ip, userAgent	Audit

newsletter_subscribers	email, source, subscribedAt, unsubscribedAt	Marketing
design_drafts	draftId, customerId, designData, previewUrl, expiresAt	Design
promo_codes	code, type, value, minOrder, maxUses, usedCount, expiresAt	Commerce
referrals	ownerName, referralCode, usedCount, totalEarnings, active	Marketing
gift_hampers	slug, name, items[], basePrice, occasion, isCustomizable	Commerce
testimonials	customerName, rating, content, verified, featured	Social
reviews	productId, customerId, rating, content, verified	Social

- Add DATABASE_URL_MAIN, DATABASE_URL_TRYNEX_DB, DATABASE_FAILOVER secrets in Render to activate Neon failover chain
- Verify Neon connection string format: postgresql://user:pass@host.neon.tech/dbname?sslmode=require
- Run pg_stat_user_tables analysis monthly to identify unused indexes
- Add index on orders.customerEmail for fast customer order lookups
- Add index on blog_posts.slug for O(log n) post lookup
- Enable pgBouncer on Neon for connection pooling in production
